How to read this page

- This page compares the selected country's economic performance with the global average and with other countries in the dataset.
- GDP Rank, GDP Per Capita Rank, and GDP Growth Rank are ranked in descending order: Rank 1 represents the highest value and strongest performance.
- Unemployment Rate and Inflation are ranked in ascending order: Rank 1 represents the lowest rate.
- *Top 25%* indicates a leading position relative to other countries.
- *Middle range* indicates performance close to the middle of the dataset.
- *Bottom 25%* indicates a relatively lower position and may require further investigation.
- Rankings are based only on countries with available data for each metric.

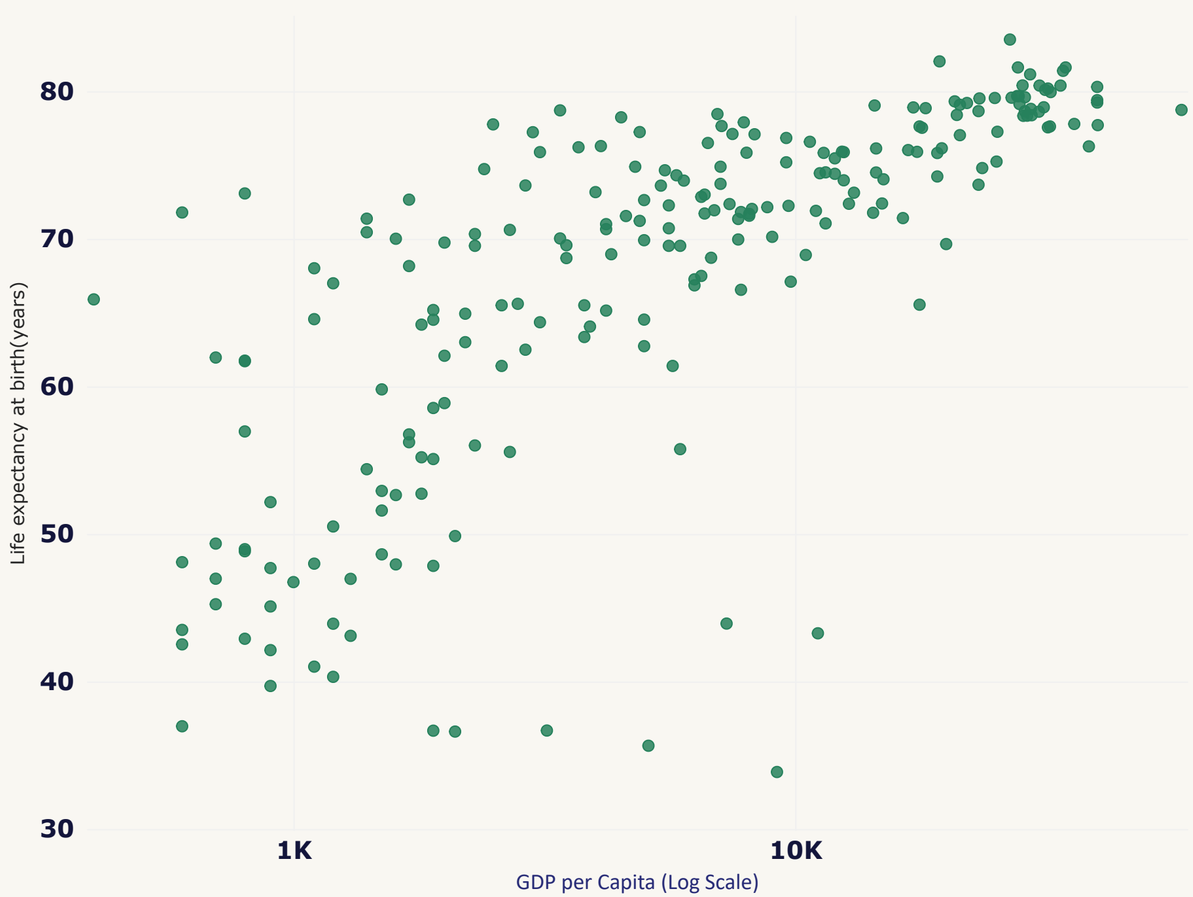

Economic Development & Health

GDP per Capita vs Infant Mortality Rate

Countries with higher GDP per capita generally tend to have lower infant mortality rates. However, some countries deviate from this pattern, indicating that income alone does not explain differences in infant mortality.

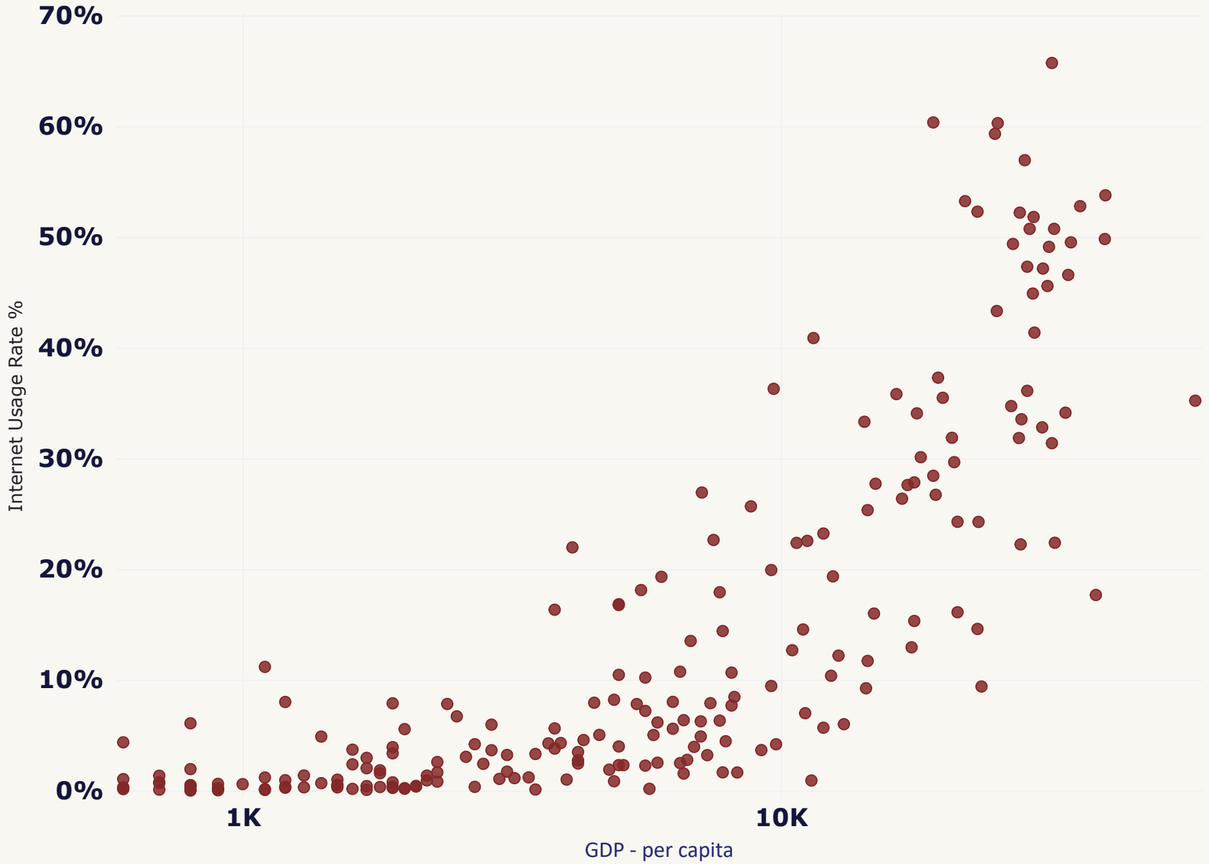

GDP per Capita vs Life Expectancy

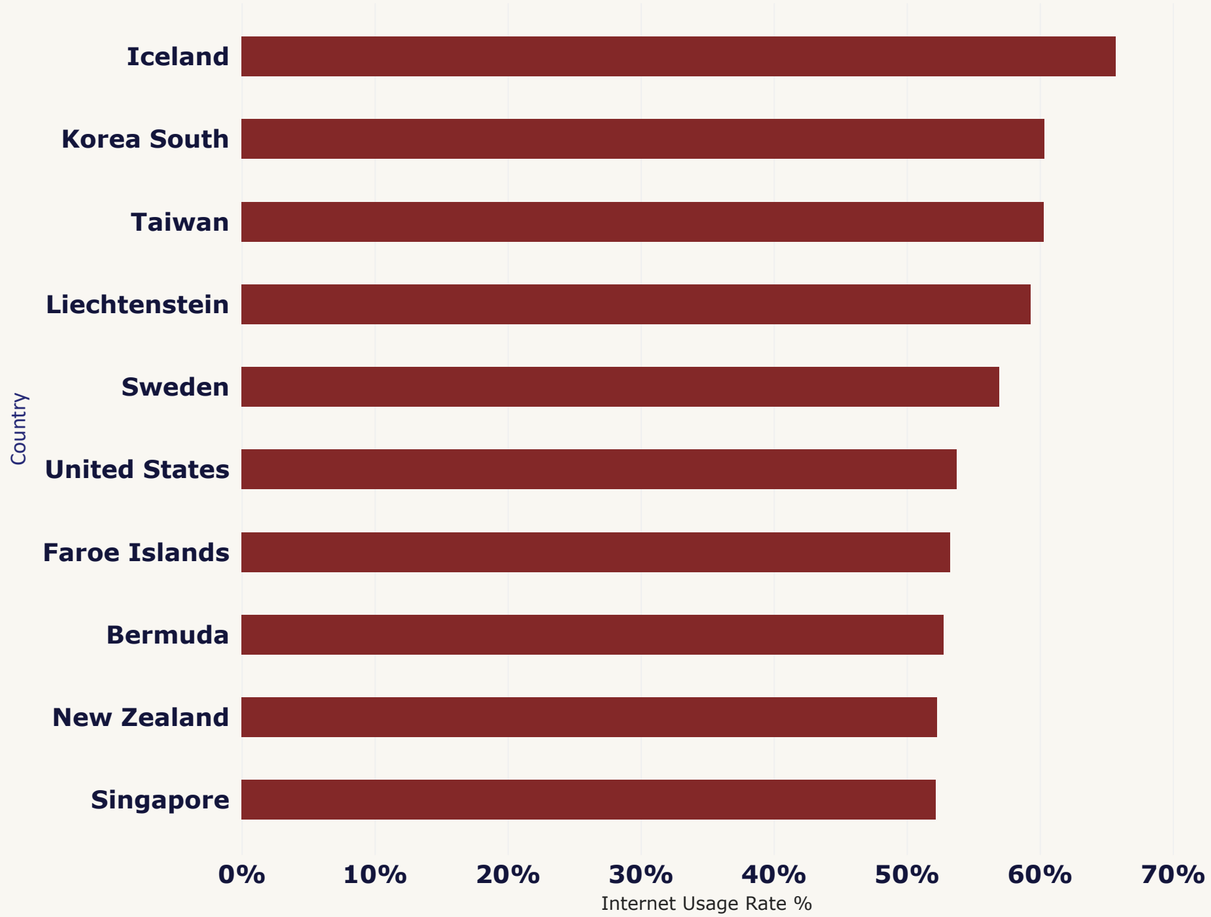

Life expectancy generally increases with GDP per capita, but some countries deviate from this trend. This suggests that factors beyond income also influence population health and longevity.

Economic Development & Technology

Relationship Between Income and Internet Users Rate

top 10 using internet

Countries with higher GDP per capita generally exhibit higher internet usage rates, indicating a strong positive relationship between economic development and digital adoption.
